Oxlaunch

2. Introduction

Crypto launchpad is a platform that allows blockchain-based projects to raise capital while providing investors with access to token sales at an early stage. This platform is a place for Initial DEX Offering (IDO) or Initial Exchange Offering (IEO) activities. The goal is to raise funds to develop crypto projects.

On this launch platform, the crypto project will determine the details of the offering, such as the token price, amount in sale, participation requirements, and sale schedule. Interested investors can purchase tokens using cryptocurrencies such as Bitcoin or Ethereum. Launchpad can also use fiat currency, but cryptocurrencies are more common.

3. What is Oxlaunch?

Is a multi-chain LaunchPad and decentralized incubator protocol. It is a blockchain project set to decentralize initial funding bringing project ideas, and innovative opportunities to backers of a project.

Providing innovative projects with the support and resources they need to achieve results, these projects are supported in the seed funding stage through the incubator program or in the early market entry stage through the Initial Project Offering (IPO) Launchpad.

The Incubator Program provides selected projects with development funds and other resources such as experienced developers to help build the product, a marketing team to help the business grow, and any other kind of support such a project may require.

Launchpad helps projects that already have a product and are ready to enter the market. Launchpad helps these projects to run what we call an IDO Initial DEX Offering, or a quality and well-coordinated token auction event. Ox adopted a solid marketing strategy to ensure that the IPO event was very successful.

4. Why Oxlaunch?

Users get early contribution opportunities to high-quality and innovative projects on a regular basis, and can interact in these projects at the seed funding stage through decentralized incubator protocols, or at the market entry stage by participating in IPOs or early-stage token sale events held on Oxlaunch. It provides users with an entry point to maximize their investment turnover.

a. Decentralized

Ox operates as a decentralized launchpad and incubator protocol, thus, angel investing, distributed seed funding, is decentralized as it should be. This gives everyone a chance to take part.

b. Easy Access to All

Ox gives everyone the opportunity to invest in great ideas and projects at a very early stage. Users can participate in early stages of seed funding and also in private and public sales.

c. Proper Inspection

Ox maintains a thorough vetting process during the project selection stage. A detailed evaluation of various project usage facets, roadmap, tokenomics, and vesting timeline was carried out.

d. Secure Platform

Security is of utmost importance, several security tools and measures such as multi-sig vaults for funds and strong transaction validation mechanisms are implemented

5. Ecosystem

Allows members to participate in various tiers and levels of partner project token sales. And uses a hybrid level token sale mechanism to ensure fairness.
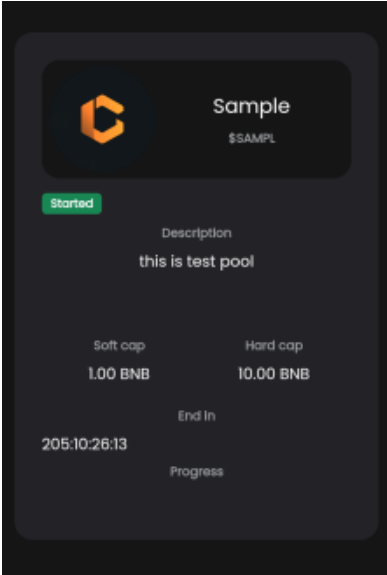

a. Incubator

Incubator allows members who contribute funds to the pool to participate in the initial funding stages of the projects being incubated. This allows retail investors to eventually become part of the investment.

b. Token Locker

Is the Incubator safe deposit box. It gives native token holders the ability to lock up tokens that have been determined by their vesting program, membership level, within a predetermined period.

c. Search

The search feature provides easy access to the contract address, by typing the contract address it will automatically be connected to the targeted search accurately and precisely. This feature can detect the authenticity of the project by searching for the smart contract token address of a project.

6. Guest Participation

Users can participate in IDO as guests. To participate as a guest, the following requirements must be met,

Guest participants must have an EVM-based wallet, login to the page, in order to participate on this platform.

7. Project Participation

Projects that will organize an early stage IDO program access the profile must log in through a predetermined network, and this gives access to the incubator feature to register as an IDO organizer.
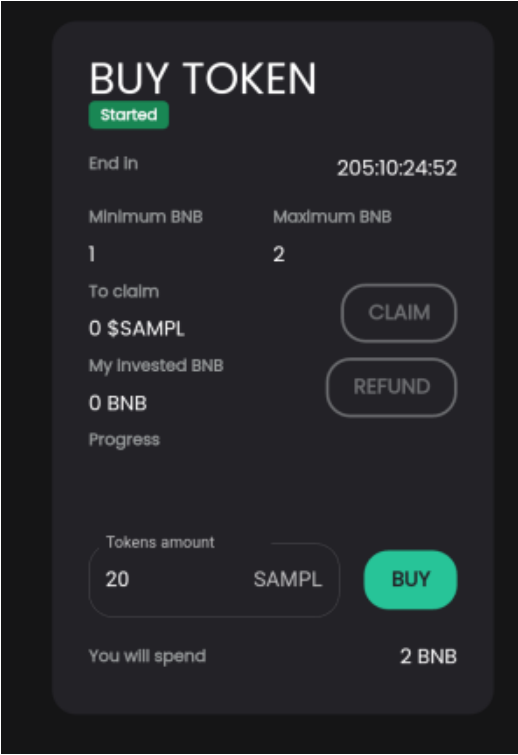

8. Economic Token

The OX utility token has unique tokenomics, used in all the features the protocol offers so the token has many uses.

As an investment tool

As a transaction and payment medium

As a medium for gifts and savings

9. Conclusion

Launchpad gives investors the opportunity to support new cryptocurrency projects and purchase tokens in the hope that the value of the tokens will increase in the future. However, since the crypto industry is full of volatility and risks, investors need to explore crypto investments and conduct in-depth research on the project.

For developers, crypto launchpads provide benefits because they can help meet launch costs. Meanwhile, from the investor's side, access to early stage sales means the opportunity to get cheaper asset prices before the crypto coin's public launch on the market.

Crypto launchpad acts as a bridge between investors and crypto startups. In this place, startups get access to funds for project development. Meanwhile early investors get access to early stage crypto coins.
